

EDINSIGHT – EARLY WARNING SYSTEM WITH INTEGRATED RTI MODULE

OnHand Schools, Inc. (OHS) is a mission-driven education technology company. We partner with progressive educators to pursue a vision for high performing 21st century schools where every student has the opportunity to reach their full academic potential. Our goal is to simplify and organize data so schools have a more holistic view of student performance. Educators can harness that clarity for new insights that drive curriculum enhancements, differentiated instruction, assessment processes, and intervention strategies.

With the ability to automatically import data from Student Information Systems, state exams, and 3rd party assessments, EdInsight can aggregate and display the key facets of student performance that drive Early Warning System Risk Scores and provides seamless integration to an RTI/MTSS module that allows you to assign, track and report on intervention programs.

A dashboard and many pre-built reports come with the system. This includes Early Warning, Spotlight, "Top 10 at Risk," Attendance and Misconduct, Student Profile Reports and more.

The district can customize the criteria that will make up the Early Warning Risk Scores. This can include Attendance, Misconduct, Course Grades, State Exam data and much more. Users have the ability to easily identify the students that are struggling and then group them based upon their needs.

The EdInsight Spotlight Report (shown below) gives your team a comprehensive view of all the data you need to make good tiering decisions. You decide what data you want to see and how you weigh each of the criteria. The system seamlessly integrates a broad range of data sources, including many 3rd party assessments.

Response to Instruction and Intervention (RTI/RTII) and Multi-Tiered System of Support (MTSS) implementations often suffer from a lack of good tracking tools to help the teachers monitor progress and evaluate the effectiveness of alternative strategies.

The EdInsight RTI/MTSS module is a full-featured, web-based solution that makes it easy to:

- Aggregate all of the data needed to support tiering decisions
- Automate tiering recommendations based on district/school criteria
- Create individual or group intervention plans and assign students to specific programs
- Track performance with integrated progress monitoring data, management alerts and meeting updates/notes
- Leverage extensive reports to evaluate the effectiveness of your interventions
- Various forms of progress monitoring you can set goals to be reached and see the weekly rate of improvement for these specific students.

You can also take advantage of several reporting features with this tool such as tracking reports, intervention effectiveness by skill, profile reports, tier history and meeting reports.

The EdInsight RTI/MTSS module is configurable, allowing for specific interventions, student tiers, meetings and progress monitoring. Educators can now easily plan, assign and track academic interventions by having their students focus on specific skills.
